

Epilepsy Through Child Eyes: A Voyage into the World of a Hidden Disability

Epilepsy is a neurological disorder that affects millions of people worldwide. It is characterized by recurrent seizures, which can range in severity from brief, barely noticeable episodes to prolonged and debilitating convulsions.

For children, epilepsy can have a profound impact on their development, education, and social life. They may face stigma and discrimination, and they may struggle to keep up with their peers in school. In addition, the fear of having a seizure can be a constant source of anxiety for children and their families.
