The book is written by a team of experts from the Center for Strategic and International Studies (CSIS), a leading think tank on international affairs. The authors draw on their extensive research and experience to provide a nuanced and balanced account of the US-China tech war.

The book begins by examining the historical roots of the conflict. The authors argue that the tech war is a continuation of the broader US-China rivalry that has been playing out in the economic, political, and military spheres for decades.

The book then goes on to analyze the key factors driving the tech war.

These include:

- **Trade:** The US and China are the world's largest trading partners. However, the tech sector has become a major source of tension between the two countries. The US has accused China of unfair trade practices, such as forced technology transfer and intellectual property theft.
- **Intellectual property:** The US and China have very different approaches to intellectual property protection. The US has a strong system of intellectual property rights, while China's system is often weaker. This has led to disputes over the theft of intellectual property, such as trade secrets and patents.
- **National security:** The US and China have different views on the role of technology in national security. The US sees technology as a vital tool for maintaining its military superiority. China, on the other hand, sees technology as a way to challenge US dominance.

The book concludes by discussing the potential consequences of the US-China tech war. The authors argue that the conflict could have a significant impact on the global economy, the development of new technologies, and the balance of power between the two superpowers.

The US-China Tech War is a timely and important book that provides a comprehensive overview of the escalating rivalry between the two superpowers in the tech sector. The book is essential reading for anyone who is interested in the future of technology and its impact on the world.

About the Authors

- **Scott Moore** is a senior fellow at the Center for Strategic and International Studies (CSIS). He is an expert on China's technology policy and its implications for the US.
- **Michael Swaine** is a senior fellow at CSIS. He is an expert on US-China relations and Chinese foreign policy.
